

We are looking for a **Scientific Advisor Regulatory Affairs**.

Apeiron-Team, what do we do?

We **support industry** with cost efficient implementation of complex **chemical related regulations**. We provide a high level of expertise in chemicals management in the entire supply chain for all relevant chemical regulations as well as for internal **Responsible Care objectives**.

Our services include:

- **Regulatory Services:** on different legislations such as REACH, REACH-like, CLP, GHS, RoHS, Biocides Directive, Nanomaterials, ETS, etc.
- **Scientific Services:** in several scientific fields such as Chemistry, Toxicology, Ecotoxicology, Exposure and Risk Assessments, etc.
- **Industrial Services:** Product Stewardship, Chemicals Management, Auditing and Trainings

The Team you would be joining...

Is a highly **motivated team of 8 people**. Our team consists of doctors in **(eco)toxicology and chemistry** and **engineers** with industrial experience. Together with a limited number of sub-contractors with complementary niche knowledge, we provide specific expertise, while being able to act in a flexible and client focused way.

Your role in the Team would be:

- Using your specialized scientific knowledge and your pragmatism to find solutions to scientifically challenging questions, amongst which risk assessments, recommendations on safe use and dossier building for complex substances and mixtures.
- Providing customer-specific advice for the implementation of chemical related legislations
- Representing customers in Consortia and defend their technical and business interests.
- Support our clients with the implementation of chemicals management and Product Stewardship programs.
- To coordinate and manage your own projects as project manager,
- Give trainings in our field of experience.

What do we expect from you:

- A master degree in (bio)chemistry, biology, life sciences, engineering or equivalent is required.
- Background and clear interest in chemistry, human and/or ecotoxicology.
- Experience in the following areas are seen as an advantage: interpretation and application of chemical related regulations, work experience in an industrial setting or consultancy.
- Good communication skills to communicate internally and with clients at all levels.
- Fluent in English (spoken and written) is a must. Good knowledge of other languages is seen as an additional asset.

- Self-organized and with a feeling for project management.
- Accurate in job realisation.
- A client oriented way of thinking with a sound sense of business
- An enthusiastic self-starter who enjoys working in a dynamic, multidisciplinary team
- Creative personality eager to learn and take initiatives.

What we offer:

- A full time job.
- Joining us to work on current and relevant regulatory questions related to environmental and/or human health issues.
- The challenge to work with large international as well as small and medium sized companies and to experience distinct manners to solve problems.
- Working in a young, dynamic and highly motivated team.
- The flexibility of a smaller company.
- Opportunity to travel for client meetings, conferences, workshops and trainings.
- Competitive salary based on the year of relevant experience.
- Benefit package including pension plan, hospitalization insurance, 24/24hr accident insurance, travel compensation, lunch pass, holidays (20+12).

Location: 2550 Kontich (Antwerp), Belgium

Implementing chemical regulations is like crossing a bridge while it's under construction. It's Apeiron-Team's goal to help industry, through strategic and scientific advice, to cross the bridge safely and efficiently.
